

# OCS / Mitie - M&A Transaction Analysis

September 2026 | Recommended acquisition announced 21 July 2026 | Ayush Chakraborty

## Executive summary

OCS agreed a recommended cash acquisition of Mitie at 218.5p per share. Mitie shareholders may retain the FY26 final dividend of 3.1p, taking headline value to 221.6p per share. The headline value represents a 46.8% premium to the 151.0p unaffected close on 20 July 2026 and implies an approximate £3.1bn fully diluted equity value.

## Verified transaction facts

| Item                               | Figure                |
|------------------------------------|-----------------------|
| Cash acquisition price             | 218.5p/share          |
| Permitted FY26 final dividend      | 3.1p/share            |
| Headline shareholder value         | 221.6p/share          |
| Unaffected close                   | 151.0p                |
| Cash-price premium                 | 44.7%                 |
| Headline premium                   | 46.8%                 |
| Approx. fully diluted equity value | £3.1bn                |
| Official combined revenue          | ~£8.5bn calendar-2025 |

## Operating reference

| Metric                              | OCS FY2025 | Mitie FY2026 |
|-------------------------------------|------------|--------------|
| Revenue                             | £2,658.6m  | £5,619m      |
| Adjusted EBITDA                     | £191.6m    | -            |
| Operating profit before Other items | £135.2m    | £264m        |
| Operating cash flow / FCF           | £163.9m    | £162m        |

The periods and profit measures are kept separate: Mitie operating profit is not presented as EBITDA, and the non-coterminous revenue figures are not used as the official combined-revenue measure.

## Financing scenario

The offer materials disclose CD&R equity and committed debt financing but do not provide enough public information to infer an exact sponsor ownership / rollover / debt perimeter. The model therefore uses an explicitly illustrative, balanced financing scenario. With £3.1bn of equity purchase value plus £125m illustrative integration cost, total uses are £3.225bn. A 50% debt-funded case implies £1.6125bn illustrative new debt and an equal sponsor-equity residual.

## Synergy scenarios

| Scenario | Run-rate | Implementation cost | Y1  | Y2  | Y3+  |
|----------|----------|---------------------|-----|-----|------|
| Bear     | £50m     | 1.50x               | 25% | 65% | 100% |
| Base     | £100m    | 1.25x               | 25% | 65% | 100% |
| Bull     | £150m    | 1.00x               | 25% | 65% | 100% |

These synergy values are modelling cases, not company guidance. Sponsor-return metrics are not presented because the public materials do not provide a fully reconciled sponsor-equity, ownership, rollover and debt perimeter.
